Moisés Alves Carneiro Filho

Tech Lead | Software Architect | Product Engineering

Fortaleza/CE, Brazil (85) 98118-8645 moises.son@gmail.com in/moisesacfilho

English: Reading C1 · Listening B2 · Speaking B1

PROFESSIONAL SUMMARY

Software architect and technical leader with 19+ years in technology, including approximately 15 years in leadership. Experienced in building and evolving B2B SaaS products, multi-tenant architectures, and mission-critical systems. Led multidisciplinary Development, DevOps, Requirements, UX, and QA teams, connecting architecture to business outcomes. Results include improving automated test coverage from 0% to over 80%, cutting deployment time by over 50%, and reducing cloud infrastructure costs by over 50%. Hands-on experience with modernization, FinOps, and AI agents for software engineering.

AREAS OF EXPERTISE

Product Engineering	B2B SaaS · Multi-tenancy · Platform evolution · FinOps · GKE Autopilot
Architecture & Distributed Systems	Microservices · Event-Driven · CQRS · RabbitMQ · Azure Service Bus · Redis · REST/SOAP
Leadership & Engineering	Technical direction · Mentoring · Stakeholder management · Code review · Automated testing · CI/CD · Quality gates · Security
Cloud, DevOps & SRE	Azure · AWS · GCP · Kubernetes · OpenShift · Helm · Terraform · Docker · GitHub Actions · Jenkins · SLIs/SLOs · Observability · FinOps
AI-Assisted Development	AI agents · GitHub Copilot · OpenCode · Software development lifecycle automation

Supporting stack: Java/Spring Boot · Node.js/NestJS · TypeScript · C#/.NET · Angular · React · Go · Python · SQL Server · PostgreSQL · Oracle

PROFESSIONAL EXPERIENCE

Technical Lead and Software Architect

Jun 2022 – Sep 2026

Atos / Semantix

- Led Development, DevOps, Requirements, UX and QA disciplines, with technical responsibility for two commercial B2B SaaS products: MySeat (workspace booking) and MySupport (ITIL-aligned ITSM with CMDB, ticketing and knowledge base).
- Owned MySeat architecture with TypeScript, NestJS and Angular on Kubernetes, with client isolation through namespaces, dedicated application instances and middleware.
- Modernized Angular/NestJS dependencies, restored MySeat automated tests from 0% to over 80% coverage and introduced AI-agent quality gates integrated with GitHub Actions.
- Migrated MySeat and MySupport production environments from Azure Kubernetes to GKE Autopilot, redesigning Terraform, storage, container registry, ingress and Cloudflare/Let's Encrypt certificate workflows. Reduced cloud infrastructure spending by over 50% versus previous costs; staying on Azure would have led to a projected 34% increase.
- Migrated CI/CD from GitLab to GitHub Actions, supported observability with Prometheus and Grafana and cut deployment time by over 50%.
- Progressively modernized MySupport, upgrading ColdFusion to 2023 and improving its Angular UI; partnered with the Product Owner on roadmap, refinement and architectural decisions.

Technical Lead and Software Architect

Apr 2021 – May 2022

JBQ Global (Pague Menos)

- Led stabilization and production rollout of a business-critical retail platform, using Kubernetes on AWS and Azure DevOps automation.
- Developed and coordinated integrations between e-commerce and legacy applications using C#/.NET Core, focused on resilience and operational continuity.

Technical Lead and Software Architect

Jan 2018 – Apr 2021

Ceará State Treasury Department (SEFAZ-CE)

- Modernized mission-critical tax systems using Java/Spring Boot, .NET, Angular and asynchronous RabbitMQ processing.
- Improved architecture, Jenkins/OpenShift CI/CD and automated tests, reaching over 80% coverage.
- Reduced tax-processing time by more than 50%, bringing processing failures close to zero.

Technical Lead and Software Architect

Dec 2007 – Jan 2018

ND Engenharia e Software (now Softlab Soluções)

- Approximately ten years at a laboratory software product company, progressing from support and development to technical leadership and architecture. Evolved SoftLab (LIS) and helped create Pulse, a usage-priced B2B SaaS product.
- Hands-on lead of a four-to-six-person Pulse team serving approximately 100 customers and an aggregate volume of 100,000 to 1 million laboratory results per month.
- Designed multi-tenant architecture on Microsoft Azure, with shared infrastructure and logical tenant isolation using unique identifiers and hashes across Azure SQL, Table Storage and queues.
- Performed FinOps analyses of PDF transmission and storage costs before and after digital signing, aligning design decisions with product margins.
- Optimized Azure SQL indexes and non-relational Table Storage data models; developed with .NET Framework/ASP.NET MVC, Blob Storage, async processing, web, Android, iOS and Jenkins CI/CD.
- Contributed to SoftLab technology modernization across Delphi, Java and C#/.NET initiatives.

SELECTED TECHNICAL PROJECTS

tab5-os

github.com/moisesfilho/tab5-os

An evolving proof of concept for M5Stack Tab5 (ESP32-P4). Implemented features include WebAssembly app isolation through the WAMR runtime, a Host ABI with controlled access to the UI and hardware, per-app isolated storage, a .tab5pkg package manager, and an SDK for C/C++ and WebAssembly apps. It also includes an LVGL interface, IMU-based rotation, and light and dark themes.

Agent Toolkit

github.com/moisesfilho/agent-toolkit

Portable collection of AI agents, reusable skills, development workflows, templates, and documentation for multiple AI coding tools.

Shelloma (CLI)

github.com/moisesfilho/shelloma

Command-line interface (CLI) tool in Go that translates natural language into terminal commands using local Ollama to ensure data privacy. It features multi-step execution, custom rules, and safety protection against dangerous commands.

gmail-cli

github.com/moisesfilho/gmail-cli

Python CLI to manage Gmail emails, labels, drafts, and attachments straight from the terminal, featuring OAuth 2.0 authentication, batch operations, and AI classification via LLM providers (local Ollama, OpenAI, Gemini, and OpenCode Go). Includes a natural language command, AI/RAG email export (JSON, JSONL, and Markdown), and 100% test coverage.

Other projects

- **Copados 2026 (PWA)** Angular/PWA application using the FIFA API.
- **whatsapp-cli** Node.js CLI for WhatsApp messaging automation.
- **linkedin-cli** Python CLI for publishing and managing LinkedIn posts.

EDUCATION

Bachelor's Degree in Information Systems
Faculdade 7 de Setembro — Completed in 2008

RECENT PROFESSIONAL DEVELOPMENT

License to Manager – Leadership Training | Atos, 2024
