Moisés Alves Carneiro Filho

Tech Lead | Software Development Technical Leader | Software Architect

Fortaleza/CE, Brazil (85) 98118-8645 moises.son@gmail.com in/moisesacfilho

English: Reading C1 · Listening B2 · Speaking B1

PROFESSIONAL SUMMARY

Software architect and technical leader with 19+ years of experience, including 15 in leadership. I connect strategy, architecture, and execution to evolve mission-critical systems, grow engineering teams, and improve delivery reliability. Outcomes include over 50% reductions in deployment time and infrastructure costs, over 50% less tax-processing time with near-zero failures, and near-instant, loss-free delivery of healthcare results through web and mobile channels.

AREAS OF EXPERTISE

Architecture & Distributed Systems	Microservices · Event-Driven · CQRS · RabbitMQ · Azure Service Bus · Redis · REST/SOAP
Leadership & Engineering	Technical direction · Mentoring · Stakeholder management · Code review · Automated testing · CI/CD · Quality gates · Security
Cloud, DevOps & SRE	Azure · AWS · GCP · Kubernetes · OpenShift · Helm · Terraform · Docker · GitHub Actions · Jenkins · SLIs/SLOs · Observability · FinOps
AI-Assisted Development	AI agents · GitHub Copilot · OpenCode · Software development lifecycle automation

Supporting stack: Java/Spring Boot · Node.js/NestJS · TypeScript · C#/.NET · Angular · React · Go · Python · SQL Server · PostgreSQL · Oracle

PROFESSIONAL EXPERIENCE

Coordinator and Tech Lead

Jun 2022 – Sep 2026

Atos/Semantix

- **Technical leadership:** Coordinated multidisciplinary teams of 10 to 30, aligning business strategy, technical execution, and people development.

- **AI and software lifecycle:** Created AI agents and governed planning, development, testing, review, security, build, deployment, and operations.
- **Quality and security:** AI-assisted quality gates, Pull Request templates and required criteria, and CI/CD validations to prevent bugs and standardize reviews.
- **Architecture and backend:** Defined the architecture of global tools with Node.js, TypeScript, and NestJS, using Redis for caching and processing queues.
- **Testing and reliability:** Testing strategy that raised coverage from 0% to over 80%, with monitoring and metrics for critical systems.
- **Delivery and cloud:** Automated deployments with GitHub Actions, Kubernetes, Helm, and Terraform, reducing deployment time by over 50%. Migrated a production system from Azure to GCP Autopilot, replacing a more rigid setup and reducing costs by over 50%.

Team size: 10 to 30 people

Tech Lead

Apr 2021 – May 2022

JBQ Global (Pague Menos)

- **Cloud and operations:** Orchestration of critical Kubernetes environments on AWS with automated deployments through Azure DevOps, ensuring high availability and resilience.
- **Incidents and production:** Led the technical team through the stabilization and production rollout of a highly critical retail product.
- **System integration:** Developed and coordinated complex integrations between an e-commerce platform and legacy systems using C#/.NET Core.

Team size: 5 to 10 people

Tech Lead and Software Architect

Jan 2018 – Apr 2021

Secretaria da Fazenda do Ceará (SEFAZ-CE)

- **Mission-critical system:** Technical leadership for the goods-in-transit system, responsible for the automated processing and analysis of tax actions in Ceará.
- **Asynchronous processing:** Definition of the RabbitMQ-based architecture for the asynchronous processing of the system's tax actions.
- **Java, .NET, and architecture:** Worked on a Java 8 project with Spring Boot, JSF, and Angular; contributed to the architecture of the department's first core .NET projects and to its architectural standards.
- **Quality and modernization:** Full architectural review that reduced operational-failure complaints by more than 50%.
- **DevOps and testing:** As technical lead, contributed to CI/CD improvements with Jenkins and OpenShift and helped raise automated test coverage for the goods-in-transit system to over 80%.

- **Operational outcomes:** Reduced tax-action processing time by over 50%, with processing failures brought down to virtually zero.

Team size: 5 to 10 people

Project Manager and Software Architect

Dec 2007 – Jan 2018

ND Engenharia e Software (now Softlab Soluções)

- **Leadership and growth:** Career progression from developer to Project Manager and Software Architect, leading teams, deliveries, and strategic technical decisions.
- **Cloud architecture:** Architected, built, and deployed Pulse Saúde to receive completed results from Softlab systems used by clients across Brazil, centralize access, and deliver digitally signed PDFs to patients through the web and Android and iOS apps.
- **Asynchronous processing:** Used Azure Service Bus for asynchronous processing of medical examination results, ensuring fast and reliable delivery.
- **Storage and scalability:** Used Azure Tables, Storage Account, and SQL Azure to create a hybrid storage architecture according to the application's needs.
- **Outcomes and integration:** Near-instant delivery of results through the web and Android and iOS apps, without losses and with fast updates; SOAP/REST, XML, and JSON integrations.

Team size: 5 to 10 people

SELECTED TECHNICAL PROJECTS

tab5-os

github.com/moisesfilho/tab5-os

An evolving proof of concept for M5Stack Tab5 (ESP32-P4). Implemented features include WebAssembly app isolation through the WAMR runtime, a Host ABI with controlled access to the UI and hardware, per-app isolated storage, a .tab5pkg package manager, and an SDK for C/C++ and WebAssembly apps. It also includes an LVGL interface, IMU-based rotation, and light and dark themes.

Agent Toolkit

github.com/moisesfilho/agent-toolkit

Portable collection of AI agents, reusable skills, development workflows, templates, and documentation for multiple AI coding tools.

Shelloma (CLI)

github.com/moisesfilho/shelloma

Command-line interface (CLI) tool in Go that translates natural language into terminal commands using local Ollama to ensure data privacy. It features multi-step execution, custom rules, and safety protection against dangerous commands.

gmail-cli github.com/moisesfilho/gmail-cli

Python CLI to manage Gmail emails, labels, drafts, and attachments straight from the terminal, featuring OAuth 2.0 authentication, batch operations, and AI classification via LLM providers (local Ollama, OpenAI, Gemini, and OpenCode Go). Includes a natural language command, AI/RAG email export (JSON, JSONL, and Markdown), and 100% test coverage.

Other projects

- **Copados 2026 (PWA)** Angular/PWA application using the FIFA API.
- **whatsapp-cli** Node.js CLI for WhatsApp messaging automation.
- **linkedin-cli** Python CLI for publishing and managing LinkedIn posts.

EDUCATION

Bachelor's Degree in Information Systems
Faculdade 7 de Setembro — Completed in 2008

RECENT PROFESSIONAL DEVELOPMENT

License to Manager – Leadership Training | Atos, 2024
